

Using the Market Query to Set-up Showmanship Classes

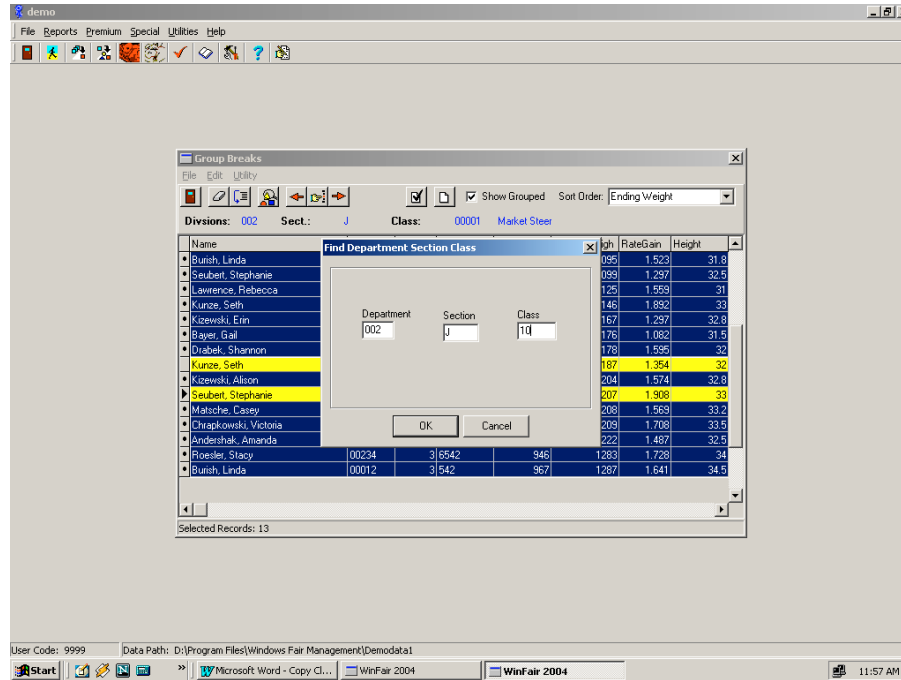

The Market Query can be used to copy market entries from the original entry class used to group animals by weight for judging to a market showmanship class where the exhibitors can be sorted by age and then the class split into groups by exhibitor age.

1. Create a *Fairbook* class for market showmanship.
2. Create a corresponding *Market Book* class for market showmanship.
3. Go **File|Mark Market Entries Query**.

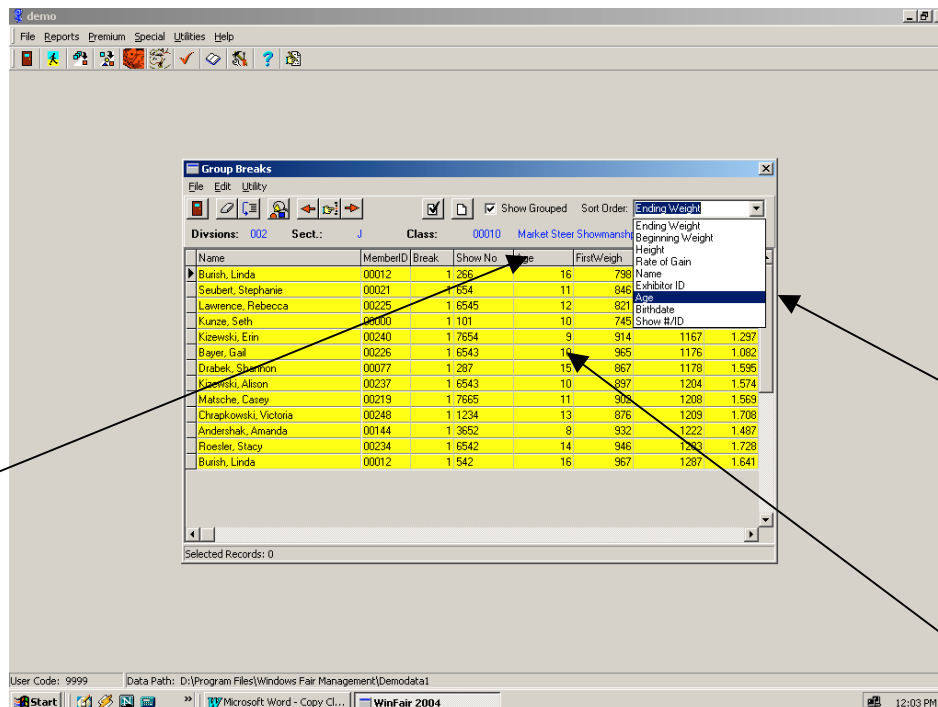

In the above screen the entries in the original market class that are to be copied to the showmanship class have been highlighted. Go **Utility|Edit Options|Copy then Change Class with Break**. Click on *Copy the Change Class with Break* to activate the copy option.

4. Click on the **Group Button**.

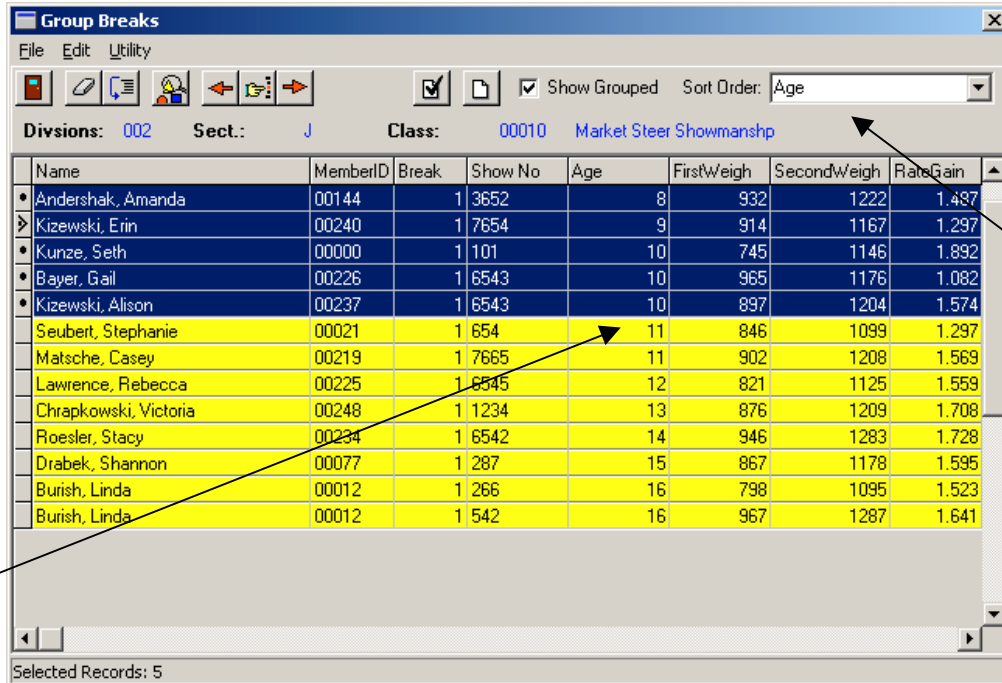

An input box will display. Type the *Dept/Section/Class* of the Fairbook class where the current entries are to be copied. In our case, we are copying the entries to a Showmanship class. Click **OK**. A Break Number input screen will display. Enter '1' for a *Break Number* as a default.

5. Go **File|Find**. The highlighted entries will now display in the new class. The original entries remain in the market class.

Use the bottom *Scroll Bar* to view the rightmost columns of the query spreadsheet. Drag the *Age* column (Exhibitor Age) to the center of the screen. Select '*Age*' as the *Sort Order*.

- The query will sort by exhibitor age. Use the query options to mark the breaks within the showmanship class according to exhibitor age.
